Wireless setup for Windows Vista

Click on the control panel then click Network and Internet

Click Network and Sharing Center

Click Manage wireless networks

Click Add
How do you want to add a network?

- **Add a network that is in range of this computer**
  - This shows you a list of networks that are currently available and lets you connect to one. Once you connect, a profile for the network is saved on your computer.

- **Manually create a network profile**
  - This creates a new network profile or locates an existing network and saves a profile for the network on your computer. You need to know the network name (SSID) and security key (if applicable).

- **Create an ad hoc network**
  - This creates a temporary network for sharing files or an Internet connection

Enter information for the wireless network you want to add

- **Network name:** NWACC-1
- **Security type:** WEP
- **Encryption type:** WEP
- **Security Key/Passphrase:** 73747564656a746163652373
- **Start this connection automatically**
- **Connect even if the network is not broadcasting**
  
  Warning: If you select this option, your computer's privacy might be at risk.

Successfully added NWACC-1

- **Connect to...**
  - Open the ‘Connect to a network’ dialog so I can connect.

- **Change connection settings**
  - Open the connection properties so that I can change the settings.

Manage wireless networks that use (Wireless Network Connection)

Windows tries to connect to these networks in the order listed below. To change the order, drag a network up or down in the list. You can also add or remove network profiles.

- **NWACC-1**
  - Security: WEP
  - Type: Any supported
  - Automatically connect

- **Linkrout2**
  - Security: WEP
  - Type: Any supported
  - Automatically connect
This is what you want to see when you are connected
